iLink - Connected for Success!

Lumbar and thoracolumbar bracing have been prescribed by clinicians for non-operative and post operative spine patients for decades. Have you ever wondered if your patient is actually wearing the brace you've prescribed? Well now you can know! iLink is an electronic module that detects if a patient is wearing their brace and records and uploads that information to a secure website through the user's smartphone. Now you can know, anytime, anywhere.

And especially for your Post-Surgery patients, now you can know even more.....

With the sensors on-board the iLink module measures patient's posture and mobility. Time spent upright versus recumbent and ambulation are keys to avoiding postoperative complications due to inactivity. Now you can know, anytime, anywhere as this data is uploaded daily to the secure website.

Connecting you in Real Time

Bluetooth module can be added to any brace

Add to Any Brace

The Bluetooth module is available as a compact module you can mount within any LSO, TLSO, or custom spinal brace. It's small size allows for flexible placement within the brace and can detect wearing through up to 1/4 inch of foam or other materials. Your brace is easily connected by iLink through the downloadable iLink smartphone APP. Data is automatically synced to the cloud for remote monitoring.

iLink Works for Pediatric Scoliosis too!

iLink can be built into your child's custom brace so you can be a part of their treatment plan. You can monitor progress and provide reinforcement to achieve the best possible outcome for your child. It records and uploads information daily without battery replacement or recharging for up to 6 months!

iLink LSO and TLSO with monitoring Built In!

If you're looking for a turnkey brace with built-in iLink monitoring capabilities, consider the competitively priced LSO and TLSO offered by Intellirod.

One price gets you a comfortable aesthetic brace with unmatched integrated monitoring to drive patient engagement, compliance, satisfaction and ultimately outcomes!

Check your progress daily or weekly with the free iLink smartphone APP
